

# FOCUS ON CANCER AND IMMUNO-ONCOLOGY *PART 1*

*Modalità Webinar*

**Napoli 15 Giugno 2020**

Presidents: Sabino De Placido / Vincenzo Montesarchio

## ● **RATIONALE**

Today the immuno-oncology (I-O) represents a revolution in the field of oncology. The checkpoints inhibitors (anti-CTLA4, anti-PD-1, etc.), are able to kill cancer cells indirectly, through the interaction with the immune system cells. The characteristics of adaptability and memory of the immune-system make it able to reach longterm survival (more than 10 years). For this reason, I-O became the fourth pillars in the treatment of cancer together surgery, radiotherapy, and chemotherapy. After the excellent results reached in different type of cancers, I-O is exploring a wide range of new molecules and possible combinations or sequencing, in order to increase the number of patients with a long-term benefit. The intent of this course , with contributions from Società Campana di Immunoncologia ( SCITO) is to offer a general educational overview about the topics described.
